

"SEAL SAVER"* APPLICATION UPDATE

*PATENTED

*Photos courtesy of Michael Braunlein

User/Company: WesternGeco
Machine: Multi-component Seismic Technology Vessel
Application: Tow Point Ram cylinders

In August of 2008, one of WesternGeco's chief mechanics, Michael Braunlein, contacted us in regard to an application for one of their vessels. It seemed the salty sea air and other debris was prematurely pitting their tow point ram cylinders and damaging the ram seals. Using our standard ballistic nylon material, Fluid Control Services designed and manufactured a custom "Seal Saver"* to take care of the problem. Installing the "Seal Saver"* protective cylinder cover not only allows WesternGeco to enjoy extended cylinder life with less downtime, it also minimizes the potential for hazardous oil leaks and prevents the intrusion of contaminants into their hydraulic system, which will help prolong the life of the ship's valves and pumps.

This *patented product is being utilized in all types of industries throughout the United States and in over 20 countries around the world.

THE "SEAL SAVER" PROTECTIVE CYLINDER COVER - TAKING PREVENTATIVE MAINTENANCE TO A NEW LEVEL
